Jerry Maguire

Age: 10 years
Species: warm blood trotter
Breed: American
Sex: gelding
Weight: 430 kg
Father: Kosar
Mother: South Florida

It is at the moment the only racing horse in the stable. The horse has suffered from many viral infections during the last three years.

In the year 2003 it came in our stable. It had very bad problem in the hind leg and also musculature was very stiff and tense. The horse was nursed by us to good conditions and we noticed, that it has been healed up from the injury.

Jerry Maguire has a very good pedigree and a very good nature and 'competition head'.

The last infection during spring 2006 and a reinfection autumn 2006 as a result of both eyes inflammation and the larynx was bloodshot on 02.11.06. The coat has been always matt-finished in spite of vermicides and food rich in vitamins.

Jerry Maguire has eaten Penergetic-t horses' product in the dosage of 4 g per day from the beginning of November 2006. Now the horse has a very shiny coat and is active. The veterinary surgeon has inspected the horse on 11.01.07 and no more viral infections and the larynx is clean. During the last three years Jerry Maguire has not had such a good and clean larynx and no phlegm in the lung vessel.

Before it get Penergetic-t horses it doesn't eat very good hay, but from the beginning of January 2007 it eats very well.

In January 2007 Jerry Maguire run a race. After the competition it was not at all tired, the eyes are bright and no cramp of muscles. On the 15.01.07 we increased the dosage to 5 g per day.
