Experiments of 'Penergetic-t' on Bari horses

Further to my last successful experiment with flies in the stables, I tried to use Penergetic-t given by you for trails & found results as below:

Trail period: 5th July 2004 to 29th July 2004

Number of horses taken up for Experiment: 4

Dosage: 5 to 6 gr. per day. Dosage administered through water for 10 days and later in the feed.

1. Mighty Yakiti Boo:

- a. Age: 3 years
- b. Problems: Wobbling (Nervous problem)
 bad coat body itch poor
 appetite
- c. Total duration of administration: 25 days.
- d. Results:
 - Appetite improved – eats everything without fuss
 - Body itch completely stopped
 - Body coat improved with beautiful shine
 - Wobbling has improved considerably, but need to be corrected with other drugs in consultation with Veterinary Doctor.
 - General health has improved very satisfactorily
 - Expected to race within 2 month, since wobbling is improving & horse is returning to normalcy.

2. Jawa

- a. Age: 7 years
- b. Problem: Poor appetite
 Poor muscle condition
 Poor body coat
- c. Total days of administration: 25 days
- d. Results:
 - Improvement in appetite
 - Improvement in muscle condition
 - Remarkable improvement in body coat
 - Horse has raced in the 1st season of Gymkhana Races during 1st week of August and won its first race, beyond the expectation of the Captain.

3. Royal Triumph

- a. Age: 9 years
- b. Problem poor appetite
 muscle problems (loss of muscle mass)
 Bad winter coat
- c. Duration of administration: 25 days
- d. Results:
 - Appetite improved
 - Muscle tone improved & build up started
 - He finished very cols to Jawa, winning 3rd position in Gymkhana Race
 - Progressing so well that likely to outshine others
 - Winter coat withered away & body shine improved very well

4. Mastan

- a. Age: 6 years
- b. Problem: poor appetite
 bad sinus problem & tends to catch cold very fast
 body condition was weak with poor muscle mass
- c. Duration of administration: 25 days
- e. Results:
 - Surprisingly the congestion cleared up & recovered completely from cold and Sinus problems. Though the rains continued, he ran in Gymkhana Race and also won the race
 - The same horses last year collapsed on the race course due to 'Asphyxiation' (choking of lungs) due to cold and congestion. Since then, he was not allowed to race. But after treatment with Penergetic-t, he not only got over chronic problem but showed that he is normal and fit.
 - Appetite improved
 - Muscle strength improved and horse has become very strong.

During the experiment period no variations were made in quantity and type of feed with usual B-vitamins. No extra medication was resorted to.

Now we are fully convinced that Penergetic-t for horses is like 'Elixir' which could do wonders. I strongly would like to recommend to our management to take up this formula to improve the whole stock of BARI horses.

Thanking you and wishing you all the best.

Sing. Gautam Surinder , Captain Bari
